

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

There were no easy parts to encapsulate.

2. What parts of encapsulating your logic were hard?

Knowing what to encapsulate and how. This is because there is a confusion on how to encapsulate abstracted functions because they seemed very similar to how encapsulation works or functions

3. Is abstracting the book preview a good or bad idea? Why?

A good idea because it gets repeated a lot of times on the code and abstracting it makes it less prone to mistakes
